
Rainlendar 2.7 BETA build 90

Posted by Rainy - 2010/05/30 11:37

Build 90 can be downloaded from here:

Windows (32-bit): Rainlendar-2.7.b90-32bit.zip
Windows (64-bit): Rainlendar-2.7.b90-64bit.zip
Linux TAR (32-bit): Rainlendar-2.7.b90-i386.tar.bz2
Linux DEB (32-bit): rainlendar2-pro_2.7.b90-1_i386.deb
Linux TAR (64-bit): Rainlendar-2.7.b90-amd64.tar.bz2
Linux DEB (64-bit): rainlendar2-pro_2.7.b90-1_amd64.deb
Mac OS X (Intel): Rainlendar-2.7.b90.dmg

This is beta version! It has not been tested.

The addons for Shadow4 skin 1.6:

<http://www.rainlendar.net/download/1.6/Shadow4-Widgets.r2skin-addon>
<http://www.rainlendar.net/download/1.6/Shadow4-Languages.r2skin-addon>

Changes:

- o Fixed drag'n'drop in todo list which had gotten broken at some point.
- o Fixed scroll bar positioning in the schedule items.
- o Removed topmost flag from the options dialog on Mac because it broke down the file dialog in the new calendar wizard.
- o New implementation for the "On Desktop" feature which should work also on Windows Vista and 7.
- o Added day, week and month views for the Chromophore skin.

Re: Rainlendar 2.7 BETA build 90

Rainy,
I've noticed in the last 2 or 3 betas that on Mac OS X 10.6 that context menus appear behind windows/alarm notifications. This isn't a huge problem on the calendar, event/task lists, etc. since they can be set to be somewhat transparent, but it's now impossible to dismiss specific alarms since the first several context items always display in the background behind the alarm notification.
I wanted to point this out in case this goes beyond just my system.

Thanks,
AWDriver

Posted by Rainy - 2010/06/02 09:49

Does not seem to happen in my system. What window position are you using (On Desktop, Normal or On Top)? Does enabling/disabling the Options->Advanced->"Keep alarm always on top" change anything?

Re: Rainlendar 2.7 BETA build 90

Posted by harpua - 2010/06/04 23:36

Is anyone besides me unable to get alarms to play with this version or is it just something I'm doing wrong?

Re: Rainlendar 2.7 BETA build 90

Posted by Rainy - 2010/06/06 04:00

Are those alarms for local Rainlendar's events or do they come from some online calendar? Have you verified that you haven't accidentally suppressed the alarms for that calendar?

=====

Re:Rainlendar 2.7 BETA build 90

Posted by harpua - 2010/06/06 04:09

Yes the alarms are for Rainlendar's events but I have it set to use another music file for the alarm sound which is a .ogg file located in another directory. I have verified that alarms are not suppressed for the Calendar in question (or any of my Calendars).

It doesn't seem to matter what file I use for the alarm sound. Even the default Rainlendar.wav doesn't play. The event box pops up when the alarm is supposed to play and gives me the option to dismiss it, but no sound plays. Otherwise, sound is working fine on my machine.

I had another question and that is whether there is any way to set different default time interval options to be available for selection from the time selection list when creating or editing events, such as, e.g., 8:00 am 8:05 am, 8:10 am, etc., etc., instead of 8:00, 8:30, 9:00, etc.

TIA.

=====

Posted by Rainy - 2010/06/06 07:48

What operating system do you have?

It's not possible to change the values in the list but you can enter the time directly to the edit control if you cannot find a suitable value from the list.

Re:Rainlendar 2.7 BETA build 90

Posted by harpua - 2010/06/06 11:50

Windows 7 x64.

Yes, I know, that's what I've been doing all along. However, I would offer as a suggestion for a possible future improvement that it would be great if you could make the time intervals that appear in that list user adjustable in the advanced settings, if possible.

Posted by keithy397 - 2010/06/07 04:03

Hi there,

I haven't been here before as I've never had a problem before and I've been using Rainlendar a couple of years at least now.

After extracting the ß90, when re-starting I get 'Access to specified device, Path or file is denied' dialogue - any ideas why please?

Thanks for a great calendar.

(w2k)

Just tried the 32-bit beta 90 version on a Windows 2000 machine and it says Rainlendar2.exe is not a valid Win32 application. Beta 89 starts up OK though.

=====

Re:Rainlendar 2.7 BETA build 90

Posted by keithy397 - 2010/06/08 06:25

Yeah, I got beta 89 working fine.

Sounds like they may have dropped support for w2k.

Thanks danr

Re:Rainlendar 2.7 BETA build 90

Posted by Rainy - 2010/06/08 08:44

The b90 is the first build compiled with Visual Studio 2010 and it seems that it cannot compile Windows 2000 compatible binaries anymore. I don't know if Microsoft is going to fix the issue but I doubt it since win2k isn't a supported platform anymore.

Posted by keithy397 - 2010/06/08 11:57

That's ok Rainy but thanks for letting me know what happened.

I'm more than happy with b89, it suits my needs perfectly - but I'd better update my OS, one day!

=====

Re:Rainlendar 2.7 BETA build 90

Posted by danr - 2010/06/08 13:06

Yes I think I'll have to stay with beta 89 on my work PC then, and use the newer features when I'm at home.

Posted by AWDriver - 2010/06/10 02:30

Using "on desktop" and "keep alarm always on top" is highlighted. The problem has corrected itself, I think due to changing from the Chromo/Chromophore skins to Shadow4.

"Does not seem to happen in my system. What window position are you using (On Desktop, Normal or On Top)? Does enabling/disabling the Options->Advanced->"Keep alarm always on top" change anything?"

I'm using b89, running in "c:/programme (x86)/" on Win7 x64. When I copy all files of the latest b90 over and replace all files, I just can't start rainlendar anymore, it directly crashes... Never had this problem before but I don't know where to get more detailed informations from to provide as bug report...

Does the same happen if you extract the files to a clean folder? Does it happen with both the 64 bit and 32 bit versions?

For me the RTM plugin crashes in the 64bit windows version. The 32bit windows version appears to work fine. This is running on Windows 7 64bit.

I tried deleting my ini file and re-creating all of my calendars with no avail. I also deleted the rainlendar install directory and re-extracted the beta in and the same crash occured. The program crashes on startup after adding the remember the milk calendar.

Also when you 'remove' a remember the milk calender via the calendar manager (32bit) it seems to leave some remnants in the rainlendar2.ini file. When I try to add a new RTM calendar it uses the previous config and won't let me authorize a different RTM account without first removing RTM traces from the ini file.

The windows crash report is below:

Problem signature:

Problem Event Name: APPCRASH
Application Name: Rainlendar2.exe
Application Version: 2.7.0.0
Application Timestamp: 4c0275e2

Re:Rainlendar 2.7 BETA build 90

Posted by Rainy - 2010/07/07 04:33

One of the 3rd party libraries was compiled incorrectly in the 64bit version which caused crashing. This should be fixed in the next build.

Edit: <http://pastebin.com/6DSZdQEp>Which files could I delete before upgrading to not lose any settings

Edit: I tried it again: When overcopying the new files and removing my rainlendar2.ini file, it works... But I want to migrate my configuration completely :(

Outlook 2010 error

Posted by Solibond - 2010/07/10 19:42

Cannot get Beta 90 to work. Error:

"unable to initialize the MAPI library." So, no profile or message store comes up... no initialization.

Re:Rainlendar 2.7 BETA build 90

Posted by Rainy - 2010/07/11 05:05

yoodilo: You can try to upgrade it so that first rename your current Rainlendar2 folder to something else. Create a new Rainlendar2 folder and extract the zip's contents to there. Copy all the .ics files and the Rainlendar2.ini file to the new folder. You can also copy the skins and custom scripts to the new folder.

Solibond: Make sure you are using the same version (32bit vs. 64bit) of Rainlendar and Outlook.

okay thanks, I'm gonna try it..
Is there any way to get the latest b91 (stable version 2.7) as zip file?

=====

Re:Rainlendar 2.7 BETA build 90

Posted by Rainy - 2010/07/15 03:33

There is no zip available for the official release but Universal Extractor at least should be able to uncompress the installer package.

Re:Rainlendar 2.7 BETA build 90

Posted by Gideon007 - 2010/07/15 16:52

Hi,

could you make it more obvious if there is a new version of Rainlendar?

I didn't see an announcemnt here and in the "Beta Announcement Thread"
http://www.rainlendar.net/cms/index.php?option=com_kunena&Itemid=42&func=view&catid=7&id=1448 I didn't look because the current date of it is 3 years, 6 months ago.
The last beta 2.7 built 90 did report that it is the newest version, too (on OS X 10.6). If you hadn't talked about a final built 91 I would have missed it completely...

(is Rainlendar2 really that old now? Since I'm using Rainlendar2 since its beta stage I somehow lost track of time :))
